Description :

Backhaus Towel Clamp (Product Code: SLE/SI/37) is a springy, lockable clamp used to attach surgical towels around an incision, either with or without piercing the skin. It is a compact 13 cm instrument with a hard ratchet and a fine, single tooth in each jaw, used by scrub nurses and surgeons when draping the operative field. It is manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India, a laboratory instruments supplier in India for hospitals and training institutions.

Specifications

Parameter	Detail
Type	Towel clamp, springy
Ratchet	Hard, lockable
Jaws	Fine, single tooth in each jaw
Length	13 cm
Material	Martensitic steel (quenched, magnetic)
Composition	0.20% carbon; 13% chromium
Intended use	Attaching towels around the surgical incision, with or without piercing the skin
Finish	Passivated
Use	Reusable
Instructions	Cleaning/sterilisation IFU
Product code	SLE/SI/37
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is a Backhaus Towel Clamp Used For?

Once the patient has been prepared, towels are laid around the incision site and must stay exactly where they are placed. The fine teeth of the Backhaus clamp pass through the layers of towel and lock under the hard ratchet, pinning them together; where the surgeon chooses, the clamp can also take a small bite of skin to anchor the towel.

Several clamps are usually needed around one incision, so buyers generally order them in multiples, and training institutions that stock scientific & laboratory instruments include them in basic surgical sets for draping practice. Before each use, check that the ratchet still locks firmly and that the two tips meet.

Manufacturer

Jain Scientific Equipments Private Limited operates under the ScienceLab name in Ambala, Haryana, and manufactures the Backhaus Towel Clamp as one of the theatre preparation instru rs and i Our comp
