Bristle retention	Bristles must not fall out with normal use
Components	All components safe for use
Packing	Individually wrapped
Product code	SLE/SAH/06
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Children's Toothbrush Used For?

A child's mouth needs a brush with a smaller head and gentler bristles than an adult's, so it can reach back teeth comfortably without hurting the gums. This soft, small-size brush is meant for that everyday job and is a standard item in school health programmes, boarding-school stores and emergency family kits.

Individual wrapping keeps each brush clean until it is handed over, which matters when brushes are distributed in bulk. After brushing, children should rinse the brush and let it air-dry upright, and it is worth replacing any brush whose bristles have splayed. Pair it with a children's toothpaste so the set suits young users from the start.

What to Specify When Ordering

- Number of children's toothbrushes.
- Whether adult toothbrushes are needed for the same family kits.
- Whether toothpaste for children should be included in the quotation.

Supplier

Jain Scientific Equipments Private Limited, which does business as ScienceLab, supplies this children's toothbrush from Ambala, Haryana, India. It sources oral-care and grooming items for scho s or as pa e Scien
