Volume marking	Clear, permanent horizontal line showing the maximum liquid volume; further marks for lower volume graduations preferred
Intended use	Surface disinfection
Product code	SLE/SAH/19
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the 1 Litre Trigger Sprayer Used For?

Cleaning teams use this sprayer to wet frequently touched surfaces — latrine slabs and door handles, tables, bed frames, handwashing stations — with a disinfectant solution before wiping or leaving it for the contact time given in their guidance. Because it resists chlorine, it can be filled with the chlorine solutions commonly used in health centres, isolation areas and emergency sanitation, at whatever strength your health guidance specifies.

For safe use, never fill above the maximum line, label each bottle with the solution it holds, and prepare chlorine solution as often as your protocol requires. After each shift, rinse the nozzle and filter with clean water so they do not clog, and store bottles away from direct sunlight and out of the reach of children.

What to Specify When Ordering

- Number of sprayers — for example one per cleaner or per ward, classroom or latrine block.
- Whether larger-area spraying needs compression sprayers as well.
- Any disinfectant, wipes or cloths to be quoted with the sprayers (the sprayer is supplied empty).
