Description :

Lamp, 15 W, 120 V (Product Code: SLE/M/63) is a clear glass-top replacement bulb with a bi-post double-contact base, used to restore illumination in microscopes and illuminators whose lamp holder takes this base and rating. Laboratory technicians keep it as a spare so that a failed bulb does not stop a practical session; it is rated 15 watts at 120 volts. It is supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, a laboratory instruments supplier in India, as one of its lab equipment spare parts for microscopy.

Specifications

Parameter	Detail
Illumination	Bulb (replacement lamp)
Glass	Clear glass top
Base	Bi-post, double contact
Wattage	15 W
Voltage	120 V
Product code	SLE/M/63
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the 15 W, 120 V Lamp Used For?

Every lamp-lit microscope eventually needs a new bulb, and a lab without a spare can lose a full practical while one is sourced. This 15 W bulb replaces a failed lamp in a microscope base, substage illuminator or lamp housing designed for a 120 V bulb with a bi-post double-contact base; the clear glass top gives an unfrosted light source for the condenser to collect. Fit it only where the instrument's lamp circuit is rated for this voltage and wattage, and compare it with the markings on the old bulb before ordering.

To change the lamp, switch off and unplug the microscope, let the old bulb cool completely, then withdraw it straight out of the holder. Line up both posts of the new lamp with the socket, press it fully home without twisting the glass, refit the cover and test at low brightness first. Keep a spare in the microscope case or store cupboard.

What to Specify When Ordering

- Confirmation that your instrument uses a 15 W, 120 V lamp
- Base type of the old lamp (this one is bi-post, double contact)
- Number of spares for your microscope fleet
- Microscope make and model, if you want us to check compatibility
