Product Name :

Dissecting Set, Student

Product Code :

SLE/EDE/07

Description :

Dissecting Set, Student (Product Code: SLE/EDE/07) is a mid-range set of 10 stainless steel dissecting instruments supplied in a PVC case as school biology lab equipment in India. Between its two pairs of scissors, a no. 3 scalpel handle with blades, a seeker and a magnifier, it covers most of the cutting, holding and observation steps in school and first-year college practicals.Made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, it is a practical choiceamong science kits for students in India who want their own instruments.

Specifications

Parameter	Detail
Product type	Dissecting instruments set, student
Number of instruments	10
Instrument material	Stainless steel
Case	PVC case
Scissors	Sharp-blunt, 125 mm; sharp, 100 mm
Scalpel handle	No. 3, with 2 blades

Contents as listed:

- 1 Needle
- 1 Scissor, sharp-blunt, 125 mm
- 1 Scissors, sharp, 100 mm
- 1 Scalpel handle (no. 3) with 2 blades
- 2 Scalpels
- 1 Forceps, blunt
- 1 Forceps, sharp
- 1 Seeker
- 1 Razor
- 1 Magnifier

Typical Use

A typical session starts with the sharp-blunt scissors, whose rounded blade slides under the body wall without piercing the organs below. The smaller sharp scissors and the bladed handle then take care of finer cuts, the forceps hold tissue steady, and the seeker follows nerves and blood vessels so students can name them in their record book. The magnifier helps with small features such as setae, mouthparts or floral parts.

Because every student can keep a personal case through the year, teachers spend less time distributing shared tools and more time on technique. Many schools list this set among their core biology teaching aids and pair it with a wax tray per bench. Clean the blades carefully, dry all pieces and close the case only once the instruments are fully dry.
