Product Name :

Enzyme Biotechnology Kit

Product Code :

SLE/BL/042

Email : sales@scilabexport.com
Phone: +91-7082934803

Description :

Enzyme Biotechnology Kit (Product Code: SLE/BL/042) is a practical experiment kit used to show how industry uses enzymes, in senior secondary school and college biotechnology classes. Its four experiments cover enzymes in washing powders, pectinase in fruit juice production,rennet in cheese production and protease in meat tenderisers. It is supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India, as a biotechnology lab kit for schools and colleges.

Key Details

Parameter	Detail
Type	Industrial enzyme experiment kit
Experiment 1	Enzymes in washing powders
Experiment 2	Demonstration of pectinase in fruit juice production
Experiment 3	Rennet in cheese production
Experiment 4	Protease in meat tenderisers
Learning focus	Use of enzymes by industry; enzyme-secreting micro-organisms have in most cases replaced more expensive traditional sources
Contents list	Available on request
Shelf life	Depends on the chemical, its grade and storage conditions — ask us for the expiry date of the batch you are quoted
Product code	SLE/BL/042
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Enzyme Biotechnology Kit Used For?

Each experiment links a classroom test to a product students already know. With washing powders, they compare how biological detergent breaks down protein-based stains against a non-biological control. In the pectinase demonstration, fruit pulp treated with the enzyme releases more juice, and clearer juice, than untreated pulp. Rennet shows milk proteins clotting into curds — the first step in cheese making — and the meat tenderiser experiment shows a protease digesting a protein sample.

The set-ups make a good enzyme experiment kit for school coursework because variables such as temperature, enzyme concentration and time can each be changed and graphed. They also open a discussion of why industry now sources many enzymes from micro-organisms rather than from traditional sources such as animal tissue. Use a water bath to hold temperatures steady, measure volumes carefully for fair comparisons, and store the enzyme components as their labels direct when the kit arrives.
