Description :

The **Dissection Replacement Pad** (Product Code: SLE/EDE/23) is a spare pad for thedissection pan and pad set, measuring 25 x 16cm and 10mm thick. Made of flexible syntheticmaterial, it holds pins securely and offers a smooth, long-lasting working surface, so a worn padcan be renewed without buying a whole new pan. Labs that keep a school biology lab setup inIndia running term after term use it to refresh heavily pinned pads. It is made by the biology lab equipment manufacturer in India, **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala.

Specifications

Parameter	Detail
Type	Replacement dissection pad
For use with	Dissection pan and pad set
Material	Flexible synthetic material
Dimensions	25 x 16cm
Thickness	10mm
Surface	Smooth and long-lasting; holds pins securely
Wax	Not needed — replaces dissection wax and eliminates remelting

Typical Use

Every pin pushed into a pad leaves a small channel, and after many classes the most-used central area no longer grips as firmly as the edges. That is the moment to lift out the old pad and drop in a new one. The 10mm thickness gives dissecting pins enough depth to seat firmly when they are angled outward, which keeps skin flaps and membranes open while students draw and label what they see.

Because no wax is involved, there is no heating, pouring or waiting for a surface to set before the next practical. Many departments keep a few spare pads in the store so a pan is never out of action when lab specimens are being prepared for a biological practical. Clean the pad with mild detergent and water after each use, remove every pin, and store it flat and dry so it keeps its shape.

Manufacturer

ScienceLab replacement parts are produced by Jain Scientific Equipments Private Limited, an Ambala, Haryana manufacturer of laboratory teaching equipment serving customers in India and international markets. The company profile gives an overview of the organisation.
