Description :

The **Dissection Replacement Pad, White** (Product Code: SLE/EDE/24) is a white, 10mm thick pad of flexible synthetic material, measuring 25 x 14cm, made as a replacement for the dissection pan and pad set. A light-coloured working surface makes dark tissue, fine vessels and small parts stand out clearly, which helps students see and record detail. Like the standard pad, it replaces dissection wax and removes the need to remelt old wax. It is manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, as one of its biology teaching aids for India and export customers.

Specifications

Parameter	Detail
Type	Replacement dissection pad
For use with	Dissection pan and pad set
Colour	White
Material	Flexible synthetic material
Dimensions	25 x 14cm
Thickness	10mm
Wax	Not required — replaces dissection wax

Typical Use

The white surface is chosen when contrast matters: tracing thin blood vessels, locating small glands, or photographing a finished dissection for a practical record or display. It also shows clearly when the pad needs cleaning, which encourages good hygiene habits among students. The 10mm depth accepts dissecting pins pushed in at an angle, so specimens stay spread open while observations are made.

A school laboratory equipment supplier in India will usually recommend keeping one or two spare pads per pan set, so that a pad can be changed during a busy practical week. Wash the pad with mild detergent and cold water after each class, since hot water tends to set stains on pale surfaces, then dry it flat. Swap it out once pinning no longer feels firm.

Manufacturer

This white pad is made by Jain Scientific Equipments Private Limited, the Ambala, Haryana company that sells its laboratory products under the ScienceLab name. To learn about our operations, please see the company profile.
