Description :

The **Endocrine System Model Activity Set** (Product Code: SLE/A/155) represents seven endocrine glands, each depicted whole and again as a magnified section in detail, together with closely related organs. Covering the pituitary, thyroid, parathyroid and adrenal glands as well as the pancreas, ovaries and testes, it gives biology teachers one human biology model set for chapters on hormones and chemical coordination in schools, colleges and nursing programmes. The set is manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)** in Ambala aspart of its school biology lab equipment in India.

Specifications

Parameter	Detail
Glands depicted	Seven: pituitary, thyroid, parathyroid and adrenal glands, pancreas, ovaries and testes
Views	Each gland shown whole and as a magnified section in detail
Additional structures	Closely related organs are also depicted
Format	Model activity set

Typical Use

A useful approach is to begin with the whole-gland views so students can place each gland in the body, then move to the magnified sections to discuss what happens inside the tissue that produces hormones. Because both ovaries and testes are included, the set supports a side-by-side comparison of male and female reproductive hormones, while the pancreas opens a link to blood-sugar regulation and digestion.

For group work, give each team one or two glands and ask them to build a short profile — location, neighbouring organs, the hormones released and the tissues those hormones act on — then present it to the class using the model. Activities like this turn the set into working school biology lab equipment rather than a display piece.

Manufacturer

Jain Scientific Equipments Private Limited produces this activity set under its trading name, ScienceLab, from its base in Ambala, Haryana, where it builds biology models and science laboratory apparatus for education buyers. Read the company profile for an overview of the business.

Related Human Models

Models teachers often use alongside this set when covering hormones and the organs they affect:

- Human Endocrine Organs Model — an organ-level model for showing where the glands sit in the body
- Kidney with Adrenal Gland Model — a closer look at the adrenal gland and its vessels
