Description :

Crime Scene Tape (Product Code: SLE/CH/116) is a bright yellow roll of barrier tape, 30 m long, made for forensics crime scene lessons. Stretched across a doorway or around a set of benches, it instantly turns part of a classroom into a “scene” that students must investigate carefully and must not disturb. It is a small item from our school lab equipment supplier India range that adds realism to forensic activities, and it is supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala.

Specifications

Parameter	Detail
Format	Tape roll
Length	30 m
Colour	Bright yellow
Intended use	Forensics crime scene lessons

Typical Use

Teachers tie the tape between retort stands, chair backs or door handles to mark the boundary of a mock crime scene before students arrive. The boundary does real teaching work: only the “scene examiners” may cross it, evidence must be photographed or sketched before anything is moved, and students learn why preserving a scene matters in forensic science. A 30 m roll is long enough to cordon off several separate scenes, so different teams can each have their own area during a single lesson.

The tape also makes an eye-catching border for forensic displays at open days and for a science fair project kit India students assemble around crime-solving themes. After the lesson, roll unused or undamaged lengths back up for the next class. Keep it for teaching scenarios only; genuine hazards in a laboratory should be marked with dedicated hazard warning tape so the two messages are never confused.

Supplier

Crime Scene Tape is supplied by **Jain Scientific Equipments Private Limited**, whose products are sold under the **ScienceLab** name. The company is headquartered in Ambala, Haryana, India, where it manufactures laboratory apparatus and provides supporting classroom supplies. Read our company profile for background.
