Description :

Mini Science Kit – Teeth and Eating (Product Code: SLE/CH/165) connects biology with everyday health. Its activities ask what pupils already know about teeth, have them look at their own teeth and at animal teeth, explore why we eat and what cats eat, investigate what causes tooth decay and check how well they brush. Manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India, it is a compact health education kit for schools that links the shape of teeth to diet and good dental habits.

Key Details

Parameter	Detail
Type	Mini science kit (topic kit)
Topic	Teeth, eating and dental health
Themes	Human teeth, animal teeth and diet, reasons for eating, tooth decay, tooth brushing
Activities	Seven activities, listed below
Suitable for	Biology and health lessons on nutrition and the body

Activities performed with this kit:

- What do we know about teeth?
- Looking at your teeth
- Looking at animal teeth
- Why do we eat?
- What do cats eat?
- What causes tooth decay?
- How well do you brush your teeth?

Typical Use

The topic usually opens with a discussion of what pupils already know, followed by a close look at their own teeth in a mirror to spot incisors for cutting, canines for tearing and molars for grinding. Comparing these with animal teeth shows how tooth shape matches diet – the question “What do cats eat?” leads naturally to the sharp teeth of a meat-eater. “Why do we eat?” widens the lesson to energy, growth and a balanced diet.

The decay and brushing activities turn knowledge into habits: sugary food feeds bacteria that produce acid, which attacks tooth enamel, and pupils then check how thoroughly they clean their own teeth. As a biology experiment kit for students, it works best with firm hygiene rules – each pupil uses only their own mirror or brush, hands are washed before and after, and nothing that has been near one child’s mouth is passed to another.
