Description :

Acids Storage Cabinet (Product Code: SLE/CH/185) is a white, rectangular metal cabinet with two doors, built to hold a laboratory's stock of acids in a stable, enclosed space. Its leak proof sump keeps any spillage contained within the cabinet, which protects floors, neighbouring furniture and the people working nearby. Laboratory managers use it as a practical piece of laboratory furniture for chemistry prep rooms in schools, colleges and testing labs. It is made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala.

Specifications

Parameter	Detail
Material	Metal
Shape	Rectangular
Colour	White
Number of doors	2
Spill containment	Leak proof sump inside the cabinet
Design	Robust metal body designed for good structural stability

Typical Use

The two-door layout gives wide access to the interior, so stock bottles at the back can be reached and lifted out without moving everything in front of them. Teachers and lab assistants typically group acids by type inside the cabinet, keep the labels facing forward, and close the doors after every use so fumes and accidental knocks are kept to a minimum. Because the sump sits at the base, a slow leak shows up as liquid in the sump rather than as corrosion on the floor, which gives staff an early warning to replace a damaged bottle. It is one of the basic pieces of chemistry lab equipment for schools in India that are setting up or upgrading a preparation room.

Place the cabinet on a level floor away from heat sources and direct sunlight, and keep alkalis, oxidisers and flammable liquids in separate storage. The white finish makes stains and residues easy to spot, so wipe the inside down during routine housekeeping.

Manufacturer

ScienceLab is the brand used by Jain Scientific Equipments Private Limited, a private limited company in Ambala, Haryana that designs and makes equipment and storage for educational and research laboratories. You can read about the company on its profile page.
