Description :

Cork Stoppers (Product Code: SLE/CH/196) are brown, wood-material stoppers supplied in an assorted pack of 144, for closing test tubes, boiling tubes, bottles and flasks in the laboratory. Because the sizes are mixed, a single pack lets a teacher find a snug stopper for most of the glassware on the shelf, from a narrow test tube to the neck of a conical flask in school practicals across India. Corks are also easy to bore, so they are widely used to hold a thermometer or glass tube in place. They are supplied as chemistry lab equipment in India by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala.

Specifications

Parameter	Detail
Material	Wood
Colour	Brown
Sizes	Assorted
Pack size	144 stoppers

Typical Use

In a lower-secondary classroom, corks close test tubes of seeds in germination investigations, seal boiling tubes of water when students compare heating and cooling, and stopper small bottles of dry solids. For apparatus building, a technician bores a cork with a sharp cork borer, pushes a thermometer or delivery tube through, and fits it into a flask to make a simple gas generator or a boiling point set-up. Having an assorted pack on hand means the right size is usually already in the drawer, and a split cork is one of the easiest lab consumables to swap out mid-lesson.

Pick a cork that enters about a third to half of its length into the neck before it grips. Wet the cork slightly before boring, bore from the narrow end, and ease glass through with a twisting motion while protecting your hand. Store corks in a dry container so they do not shrink or go mouldy.

Supplier

Cork Stoppers are supplied by Jain Scientific Equipments Private Limited, which trades as ScienceLab and is located in Ambala, Haryana, serving teaching laboratories with apparatus as well as everyday consumables. More about the company appears on its profile page.

Related Chemistry Lab Equipment

Items used with cork stoppers in class and in apparatus building:

- Cork Borer Sharpener — keeps borers sharp so holes in corks come out clean.
- Cork Drills — for boring holes to take tubes and thermometers.
- Rubber Stoppers without Holes Of Different Diameters — a rubber alternative where a tighter seal is needed.
- Boiling Tube — commonly closed with a cork during practicals.
