Description :

Flask Tongs (Product Code: SLE/GFL/16) are stainless steel tongs with cork lined rectangular jaws that close around the body of a flask and hold it firmly, whether it is a small 100 ml flask or a large 2000 ml one. They let students and technicians lift hot or wet glassware from a hot plate, tripod or water bath without touching it. A practical accessory for every chemistry bench, they are manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, and supplied with its lab glassware to schools, colleges and laboratories.

Key Details

Parameter	Detail
Material	Stainless steel
Jaws	Rectangular, cork lined
Grip range	Flasks from 100 ml to 2000 ml
Purpose	Firm gripping, lifting and moving of laboratory flasks

Typical Use

After a solution has been boiled on a tripod and gauze or a hot plate, the tongs are used to take the flask off the heat and set it down on a heat-resistant mat, or to swirl it during a titration or dissolution while it is still warm. Crucible tongs, with their narrow pointed tips, are meant for small objects; the broad rectangular jaws of flask tongs spread the grip across the curved glass instead, so a conical, flat bottom or round bottom flask does not twist or slip.

The cork lining cushions the glass and gives a secure, non-scratching contact. Keep the jaws out of direct flame so the cork does not scorch, support large, full flasks from underneath as well when moving them any distance, and wipe the tongs dry after use to keep the steel and cork in good condition.

Manufacturer

These tongs are made by **Jain Scientific Equipments Private Limited**, the Ambala, Haryana company behind the **ScienceLab** brand of laboratory apparatus. Visit our company profile to learn more about us.

Related Laboratory Equipment

Other handling tools and the glassware these tongs are designed to hold:

- Beaker Tongs — the matching tool for lifting hot beakers
- Crucible & Beaker Tongs — for crucibles and small vessels
- Conical Flask — a flask regularly heated and handled with tongs
- Flat Bottom Flask, Wide Neck — for heating liquids on a tripod or hot plate
- Laboratory Round Hot Plate — a heat source from which flasks are lifted
