Product Name :

Floor Sticker, Arrow

Product Code :

SLE/CH/199

Email : sales@scilabexport.com
Phone: +91-7082934803

Description :

Floor Sticker, Arrow (Product Code: SLE/CH/199) is a social distancing floor sticker printed with a direction arrow, used to show people which way to walk along corridors, into laboratories and through queues. Facilities managers, school administrators and lab supervisors use it to set up one-way routes that keep people apart, and it is supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, a school laboratory equipment supplier in India.

Key Details

Parameter	Detail
Type	Social distancing floor sticker with arrow
Purpose	Marking the direction of movement on floors
Supplied as	Box of 10 stickers
Suitable for	Schools, universities, retail and industrial premises

Typical Use

Place arrows at regular points along a corridor or aisle to create a one-way loop, so that students entering a practical room do not meet those leaving it. In a laboratory the arrows can lead people past shared stations, such as balances or a fume cupboard, in a fixed order, which reduces crowding at the busiest points. Shops, canteens and factory floors use the same approach to guide queues towards a counter and out through a separate exit.

Before applying, sweep and wipe the floor so it is clean, dry and free of dust or polish residue, then press each sticker down firmly from the centre outwards. Check the route by walking it once, and replace any sticker that lifts at the edges. Because they arrive in a box of 10, schools can mark several routes at once while keeping spare stickers from the same lot of lab consumables for later repairs.

Supplier

These floor stickers are supplied by Jain Scientific Equipments Private Limited, known by its trading name ScienceLab and located in Ambala, Haryana. Alongside the teaching apparatus it produces, the company sources site safety and signage items so that institutions can order them in one enquiry. See our company profile for background.

Related Laboratory Equipment

These items are often ordered together when planning safe movement around a school or lab building:

- Floor Sticker, Safe Distance — marks standing points in queues along the route the arrows set.
- Hazard Warning Tape — floor marking tape for lanes and boundary lines.
- Thermometer, Infra Red, Hand Held — for non-contact temperature checks at entry points.
