Description :

Hazardous Storage Cabinet Horizontal (Product Code: SLE/CH/211) is a robust metalchemical storage cabinet of horizontal layout with 2 doors, built to give good structural stabilityand to hold any spillage inside its leak proof sump instead of letting it spread across the floor.School chemistry departments, college prep rooms and industrial labs use it to keep hazardousreagents in one controlled place, and it is made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, as part of its lab storage cabinet range in India.

Specifications

Parameter	Detail
Construction	Robust metal
Type	Horizontal
Number of doors	2
Spill containment	Leak proof sump that contains spillages within the cabinet
Design aim	Good structural stability

Typical Use

A horizontal cabinet is wider than it is tall, so bottles stand at an easy reach height and heavy containers do not have to be lifted onto high shelves. Technicians typically group chemicals by hazard class inside, keeping incompatible substances such as acids and alkalis apart, and label the doors so staff know what is stored before opening them. If a bottle leaks or breaks, the liquid runs into the sump at the base, where it can be absorbed and cleaned up without reaching the floor or other stock.

Place the cabinet on a level floor away from heat sources and exits, check the sump regularly and clear any residue promptly, and keep an up-to-date list of contents on or near the doors. As a piece of chemistry reagent cabinet storage within a school laboratory, it works best alongside a spill kit and clear hazard labelling, so that any incident can be handled quickly.

Manufacturer

The cabinet is manufactured by Jain Scientific Equipments Private Limited, an Ambala, Haryana company that uses the trading name ScienceLab and builds laboratory equipment and furniture for education and industry. Our company profile explains more about the business.

Related Chemistry Lab Equipment

These items support safe chemical storage and spill response around the cabinet:

- Hazardous Storage Cabinet Vertical — a vertical alternative where floor space is limited.
- Acid Storage Cabinet Vertical — a dedicated cabinet to keep acids separate from other stock.
