Product Name :

Inoculation Loops

Product Code :

SLE/P/36

Email : sales@scilabexport.com
Phone: +91-7082934803

Description :

Inoculation Loops (Product Code: SLE/P/36) are 10 µl sterile plastic inoculating loops used to pick up and transfer a small inoculum without damaging the agar surface in microbiology labs. Each loop is 200 mm long, made of ABS, sterilised by ethylene oxide (EO), colour coded by size and packed 1000 to a pack for routine plating in teaching and research laboratories. They are supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India.

Specifications

Parameter	Detail
Loop volume	10 µl
Material	ABS (acrylonitrile butadiene styrene)
Length	200 mm
Sterility	Sterile, EO (ethylene oxide)
Identification	Each size colour coded
Pack	Pack of 1000
Product code	SLE/P/36
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Are Inoculation Loops Used For?

An inoculation loop picks up a small, fairly consistent amount of culture from a colony, broth or sample and transfers it to fresh medium. Students use it for streak plating to obtain isolated colonies, for sub-culturing into broth tubes and for inoculating slants. A 10 µl loop is sized to hold about that volume of liquid, which is helpful when a consistent amount of sample needs to go onto a plate.

Because these loops are supplied sterile by ethylene oxide, they are ready to use from the pack with no flaming step, which removes the burner and spatter hazards of wire loops. Touch the loop lightly to the agar and draw it across the surface so the medium is not cut. Colour coding helps staff pick the right loop quickly. When planning an inoculation loop order for a lab in India, count one loop per transfer and allow for spares.

What to Specify When Ordering

- The number of packs of 1000 loops required.
- The loop volume (this listing is the 10 µl size); ask us about other colour-coded sizes.
- Related items such as cell spreaders or petri dishes to include in the same quotation.
