Description :

The **Human Nose Model on Base** (Product Code: SLE/BL/64) is an enlarged model that shows the structure of the human nose, coloured to separate its parts and numbered with a key card. Mounted on a flat base, it sits steadily on a desk or lab bench where students can study it atclose range. It is made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, and isone of the biology teaching aids India's schools, nursing colleges and ENT training departmentsuse for the sense of smell and the upper airway.

Key Details

Parameter	Detail
Type	Enlarged human nose model
Shows	Structure of the nose
Mounting	Mounted on a base
Finish	Appropriately coloured
Identification	Numbered, with key card
Suitable for	Sense organ, respiratory system and ENT anatomy lessons

Typical Use

The nose has two jobs that students often find hard to picture: it conditions the air we breathe, and it houses the sense of smell. With this enlarged model on the bench, teachers can show how the nose is built and explain how incoming air is filtered, warmed and moistened on its way to the lungs, then move on to how odours are detected. Small groups can gather round the base and use the numbers and key card to identify each structure for themselves, which works well as a short practical or a revision exercise.

It is a practical addition to school biology lab equipment in India for the sense organs and breathing chapters, and nursing and ENT trainees use it to revise nasal anatomy before clinical rotations. Keep the key card with the model, dust it with a soft brush, and wipe the coloured surfaces with a lightly damp cloth.

Manufacturer

The model is produced by Jain Scientific Equipments Private Limited, a company in Ambala, Haryana, that trades as ScienceLab and makes human anatomy models for classrooms and training institutes. Visit our company profile to find out more.
