Description :

Glass Cover Slips, No. 1 (Product Code: SLE/PS/122) are thin square cover glasses used to cover specimens on microscope slides in biology practicals, pathology teaching and general lab work. Made from soda glass, each slip is 20 x 20 mm with a uniform thickness of 0.13 to 0.16mm, supplied transparent and free of fingerprints in boxes of 100. They are supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India, a biology lab equipmentsupplier in India.

Specifications

Parameter	Detail
Material	Soda glass
Size	20 x 20 mm
Thickness	0.13 to 0.16 mm, uniform surface thickness
Thickness grade	No. 1
Finish	Transparent, without fingerprints
Pack	Box of 100 units
Product code	SLE/PS/122
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Are No. 1 Glass Cover Slips Used For?

A cover slip flattens a wet specimen into an even layer, slows evaporation and keeps stain or water away from the objective lens. In class, students place a drop of water or stain on the slide, add the specimen, then touch one edge of the cover slip to the liquid and lower it slowly with a needle or forceps so air bubbles are pushed out.

The No. 1 grade describes a thin cover glass, and the 0.13 to 0.16 mm thickness leaves room for the short working distance of high-power objectives. Because the slips are so thin, handle them by the edges or with forceps and keep the box closed when not in use. A box of 100 lets a teacher issue fresh slips for each practical rather than cleaning and reusing them.

What to Specify When Ordering

- Number of boxes of 100 cover slips.
- Whether plain glass slides, cavity slides or cover-slip forceps should be quoted with them.
- Your delivery location and whether the order is a one-off or regular supply.

Supplier

Jain Scientific Equipments Private Limited, trading as ScienceLab in Ambala, Haryana, supplies these cover slips as a lab consumable to schools, colleges, teaching laboratories and distributors. Purch
