Description :

Metal Top, Single Frame (Product Code: SLE/HF/43) is a 370mm wide, 420mm deep metal panel that caps a single frame, closing off the top of a narrow storage column. On a slim unit tucked beside a bench or doorway, the top gives a small but handy shelf for a clipboard, a tray in use or a box of labels. It is manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, for schools, colleges and hospital labs completing modular laboratory furniture in India with single column storage.

Specifications

Parameter	Detail
Type	Metal top for single frame
Material	Metal
Width	370mm
Depth	420mm
Supplied as	Top only; frame sold as a separate item

Typical Use

Single column units are often placed where space is tight — at the end of a bench run, beside a sink or in a corridor alcove — and a metal top makes the most of that footprint. Staff can rest the tray they are working from on top instead of balancing it on a nearby bench, and the closed top keeps dust and loose items from falling into the uppermost tray. When several single units stand in a row, fitting each with a top gives a tidy, continuous line.

Keep the surface clear of hot apparatus and open reagent bottles, clean it with a mild detergent solution, and reserve it for light items. If you are adding tops to frames you already own, send us the frame measurements so we can check the fit first.

Manufacturer

Made by Jain Scientific Equipments Private Limited, an Ambala, Haryana manufacturer that trades as ScienceLab, this top is one element of a storage system of frames, trolleys and trays built for educational and medical labs. Visit our company profile for more about the company.
