Description :

Hand Magnifier (Product Code: SCL119/1.8) is a general-purpose magnifier listed at 2x and 3x magnification, commonly used as an inspection tool and as a reading aid. Its lens swivels out of a protective case, and the case then doubles as the handle. The lens is break-resistant, made of optical-grade acrylic, which suits busy classrooms where glass lenses get dropped. Science teachers looking for a hand lens magnifier for school in India can order it from **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, the maker.

Specifications

Parameter	Detail
Magnification	2x, 3x
Lens material	Optical-grade acrylic, break-resistant
Design	Lens swivels out of a protective case
Handle	Protective case serves as the handle
Uses	Inspection tool and reading aid

Typical Use

Students hold the magnifier close to the eye and bring the object towards the lens until it comes into focus, then examine the texture of leaves, the grains in a rock or soil sample, the veins on an insect wing or the print quality on a label. Because the magnification is modest, the field of view stays wide and steady, which makes it a good first optical tool before children move on to a microscope. It is equally useful in the prep room for checking small markings on glassware and scales.

As a magnifier loupe in an Indian lab or classroom, it is easy to hand out and collect: the lens folds back into its case after use, which protects the acrylic surface from scratches in a drawer or pocket. Wipe the lens with a soft cloth only, since abrasive tissue can dull acrylic over time.

Manufacturer

The Hand Magnifier is made by **Jain Scientific Equipments Private Limited**, known to customers as ScienceLab and located in Ambala, Haryana. For background on our manufacturing and the range we offer schools and colleges, see the company profile.

Related Laboratory Equipment

Items commonly used with a hand magnifier during observation work:

- Pocket Magnifier — an alternative compact magnifier for field kits
- Hand Lens — another hand-held lens option for biology practicals
- Plastic Container — holds a live insect still while it is studied through a lens
- Insect Catch Set — collects the specimens students examine outdoors
- Microfiber Lens Cloth — a soft cloth for cleaning the acrylic lens
