Description :

Human Skeleton (Product Code: SCL177/1.25) is a 168 cm flexible ligamentary skeleton model used to teach human bones and joints in biology, anatomy, nursing and physical education classrooms. Built in fibre glass and moulded plastic, it is complete down to the phalanges, with a moving lower jaw, hinged feet and a key card for reference. It is made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, an OEM manufacturer of this human skeleton model inIndia, at its own factory in Ambala.

Specifications

Parameter	Detail
Type	Flexible ligamentary muscular skeleton
Length (height)	168 cm
Material	Fibre glass and moulded plastic
Completeness	Complete up to the phalanges
Joints	Every part made so that all joints move freely
Jaw and feet	Moving lower jaw; hinged feet
Stand	Heavy metal stand, movable and folding
Included	Key card
Product code	SCL177/1.25
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab) — OEM
Country of origin	India (made in Ambala, Haryana)

What Is the Human Skeleton Model Used For?

At 168 cm, this skeleton shows the bones at roughly adult human height, so students can relate each bone directly to their own body. Teachers use it to name the skull, spine, ribcage, limbs, hands and feet, and to show how freely moving joints allow bending, straightening and rotation. For colleges choosing a human skeleton model in India for anatomy, nursing or sports science teaching, it serves as the central reference at the front of the class.

The flexible ligamentary build means limbs can be moved into realistic positions during a lesson. Move joints gently and within their natural range, open the folding stand fully on a level floor before a demonstration, and use the key card to check bone names during revision. Dust it with a soft, dry cloth after use.

OEM Manufacturer

This Human Skeleton is manufactured by Jain Scientific Equipments Private Limited — trading as ScienceLab — at its own licensed factory at Saha, Ambala, Haryana, India. As the OEM, the comp r repla
