Typical Use

The charts are built around ecosystems, so a teacher can move from a single habitat – the forest floor, a lake or the sea – out to the global picture of biomes and the water cycle. A productive exercise is to display the forest and lake food-network charts together and ask students to trace energy from producers to the final consumers, then construct a food pyramid from the same organisms. The chart on harmful animals opens a discussion about the role every species plays, including those people usually see as pests.

The later charts on the death of the forest and acid rain connect biology with environmental science, which makes the series a good fit for project work and environment days. Wipe the laminated sheets with a damp cloth and store them flat or rolled, never folded, so they stay crease-free.
