What Is the Insect Magnifier Used For?

Students gently place a beetle, ant, spider or caterpillar inside the viewer, close it and look through the lenses. The 3x view shows the whole animal and how it moves, while the 6x view brings out legs, wings, antennae and body segments for drawing and identification. The specimen can be released unharmed where it was found once the observation is complete.

The same viewer works for seeds, soil animals, flowers and leaf surfaces, making it a flexible companion to an insect collection kit for school field work. Keep the viewer out of strong direct sun so the specimen does not overheat, avoid overcrowding it with several animals, and wipe the acrylic lenses with a soft dry cloth to prevent scratches.

What to Specify When Ordering

- The number of viewers, for example one per student or one per pair.
- Whether the 3x and 6x magnification of this model meets your lesson needs.
- Any catching equipment, such as nets or catch sets, to be quoted together.
