Description :

Lama 1 (Product Code: SCL305/053) is a clear, rectangular glass slide with ground edges, used as the base for mounting specimens for microscope observation in school, college and teaching laboratories. It measures 24 mm x 60 mm and is chemical resistant, so it tolerates the stains and mounting fluids handled in routine slide preparation for cell biology equipment in India. Lama 1 is supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India.

Specifications

Parameter	Detail
Type	Glass slide, ground edge
Dimensions	24 mm x 60 mm
Material	Glass
Shape	Rectangular
Colour	Clear
Chemical resistance	Chemical resistant
Product code	SCL305/053
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Lama 1 Glass Slide Used For?

Lama 1 carries the specimen in almost every basic microscopy exercise: a cheek-cell smear stained with methylene blue, a thin slice of potato showing starch grains, a drop of hay infusion with moving protozoa, or a leaf peel showing stomata. The clear glass lets light from the microscope pass straight through, while the ground edges are kinder to fingers than raw-cut glass.

At 24 mm wide, the slide takes a small square cover slip, such as Lamela 1, with a margin on each side, and its 60 mm length leaves room at one end for a pencil or marker label. Clean each slide with water and a lint-free cloth before use, hold it by the edges, and check that it sits securely under your microscope's stage clips.

What to Specify When Ordering

- Confirm that 24 mm x 60 mm is the slide size you need; the separate Lama listing is a larger slide.
- The number of slides required per class or per laboratory.
- Whether you also need cover slips, such as Lamela 1.
- Whether the slides must fit an existing slide box or storage tray.

Supplier

Lama 1 slides are sourced and supplied by Jain Scientific Equipments Private Limited, the Ambala, Haryana company that trades as ScienceLab. Alongside its own apparatus, the comp
