Description :

Human Tooth Set (Product Code: SLE/BL/91) is a human biology model set of five enlarged teeth used to teach tooth types and dental decay in school and college biology classrooms. Each tooth stands on its own base at about 8 times life size, and a lower molar with caries lets teachers show decay beside healthy teeth. The set is made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, an OEM manufacturer, at its own factory in Ambala, India.

Specifications

Parameter	Detail
Teeth in the set	Five: lower incisor, lower canine, lower premolar, lower molar with caries, upper molar
Lower incisor tooth	2 parts
Lower canine tooth	2 parts
Lower premolar tooth	1 part
Lower molar tooth with caries	2 parts
Upper molar tooth	3 parts
Mounting	Each tooth on its own stand
Enlargement	About 8 times life size
Product code	SLE/BL/91
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab) — OEM
Country of origin	India (made in Ambala, Haryana)

What Is the Human Tooth Set Used For?

In biology and health lessons the Human Tooth Set lets a teacher hold up each tooth type in turn and link its shape to its job: incisors cut, canines tear, and premolars and molars crush and grind food. Because every model is about 8 times life size, a whole class can follow the comparison from their desks, something a real tooth or a wall chart cannot offer.

As biology teaching aids for oral-health topics, the lower molar with caries is the natural talking point: place it next to the upper molar so students see the difference between a decayed tooth and a sound one, then discuss diet and brushing. Four of the five teeth are made in two or three parts, so check that every piece is back on its stand before the set is put away.

OEM Manufacturer

The Human Tooth Set is produced by Jain Scientific Equipments Private Limited, which trades under the brand ScienceLab. As the OEM (original equipment manufacturer), the company makes and assembles its anatomy models at its own licensed factory at Saha, Ambala, Haryana, India,
