Description :

Formalin (Product Code: SCL356/078) is an analytical reagent grade solution of formaldehyde in water, used to fix and preserve biological specimens for dissection, museum jars and histology practicals in school and college laboratories. It comes in a 1000 ml bottle with an MSDS, giving zoology and botany departments a stock for making up preserving solutions. It is supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, a laboratory chemicals supplier in India, alongside its biology lab equipment.

Specifications

Parameter	Detail
Chemical	Formalin (formaldehyde solution in water)
Grade	Analytical reagent
Pack size	1000 ml (1 litre)
Documentation	Supplied with MSDS
Shelf life	Shelf life depends on the chemical, its grade and storage conditions; ask us for the expiry date of the batch you are quoted.
Product code	SCL356/078
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is Formalin Used For?

Formalin cross-links proteins in tissue, which stops decay and holds cells in their natural shape. Biology departments dilute it with water to preserve whole specimens in museum jars, to fix tissues before sectioning and staining for microscope slides, and to keep plant material for later study.

Formaldehyde vapour is toxic and irritating and is classed as a carcinogen, so work in a fume cupboard or well-ventilated room, wear chemical-resistant gloves and goggles, and keep specimen jars sealed. Store the bottle tightly closed away from heat and light, and dispose of used solutions according to local rules and the MSDS.

Supplier

Jain Scientific Equipments Private Limited, trading as ScienceLab, supplies Formalin from Ambala, Haryana, for schools, colleges, biology departments with specimen museums, and research laboratories. Buyers registering us as a vendor can use the company's Importer-Exporter Code AAECJ8618A (DGFT) and GSTIN 06AAECJ8618A1ZT. Read more on the ScienceLab company profile.
