What Is the Evolution of the Animal World Chart Used For?

The chart gives a big-picture backdrop for lessons on how simple early animals gave rise to invertebrate groups, fishes, amphibians, reptiles, birds and mammals, and on the evidence behind that history, such as fossils, comparative anatomy and embryology. It helps students fit the individual animal groups they meet in zoology practicals into one continuous story.

Use it together with a fossil collection or a comparison of vertebrate limbs, so learners can handle real evidence for the relationships discussed on the wall. As part of the zoology lab equipment in a biology room, it also serves as a revision reference before tests on evolution and classification.

OEM Manufacturer

Jain Scientific Equipments Private Limited trades as ScienceLab and is the OEM of The Evolution of the Animal World chart, which it makes at its own licensed factory at Saha, Ambala, Haryana, India. Schools, universities, dealers and importers can source it straight from this manufacturer, and the same team handles any follow-up orders. The ScienceLab company profile has more about the business.
