Description :

Elastic Clamps for Rubber Pipes (Mohr Clamp) (Product Code: SCI-759/033) is a steel spring pinch clamp used to squeeze rubber tubing shut, or release it, to stop and start the flow of liquidor gas in laboratory apparatus. It takes tubing within a maximum space of 16 mm, and itschemical-resistant silver steel suits wet bench work as everyday chemistry lab equipment in India.It is made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, an OEM manufacturer, at itsown factory in Ambala, India.

Specifications

Parameter	Detail
Type	Mohr pinch clamp (elastic, spring type)
Material	Steel
Colour	Silver
Chemical resistance	Chemical resistant
Maximum space (jaw opening)	16 mm
Product code	SCI-759/033
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab) — OEM
Country of origin	India (made in Ambala, Haryana)

What Is the Mohr Clamp Used For?

The Mohr clamp is the on-off switch of rubber tubing. It closes the rubber outlet of a burette or dropping set-up that uses a tube instead of a stopcock, shuts a gas delivery line while one full gas jar is exchanged for an empty one, and holds a siphon closed until the receiving vessel is in place. Pressing the clamp opens the jaws and releasing it lets the spring close them again, so a single hand controls the flow.

Fit the clamp on a straight length of tubing, well away from glass joints, so the pinch does not strain the connection. Where a partial, steady flow is needed, pair it with a Hoffman screw clamp, which closes by degrees. Remove the clamp from tubing that is being stored, otherwise the rubber takes a permanent crease, and rinse and dry the steel after it has been splashed with chemicals.

OEM Manufacturer

Jain Scientific Equipments Private Limited, which trades as ScienceLab, is the original equipment manufacturer of these Mohr clamps and makes them at its own licensed factory in Saha, Ambala, Haryana, India. Schools and colleges, as well as dealers and importers, buy them straight from the factory, so extra clamps for new benches or replacements for lost ones are quoted by the maker — just ask us. See the ScienceLab company profile for background.
