Description :

Spoon- shoulder (Product Code: SCI-325/039) is a porcelain spoon spatula used to collect, scrape and portion solids and pastes — for example lifting crystals off a filter paper or clearing powder from a mortar — in chemistry, biology and pharmacy practicals. Made of white, chemical-resistant porcelain and 120 mm long, it matches the porcelain mortars and dishes it is usually used with. It is made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, an OEM manufacturer and laboratory equipment supplier in India, at its own factory in Ambala.

Specifications

Parameter	Detail
Material	Porcelain
Colour	White
Length	120 mm
Chemical resistance	Chemical resistant
Use	Laboratory
Product code	SCI-325/039
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab) — OEM
Country of origin	India (made in Ambala, Haryana)

What Is the Spoon-Shoulder (Porcelain Spatula) Used For?

The spatula earns its place at the end of a practical as much as at the start. After crystallisation it gathers crystals from the filter paper or the rim of an evaporating dish without crushing them; after grinding it clears the last powder from the walls of a mortar; and in biology food tests it portions starch, sugar or salt into test tubes. In pharmacy practicals, the flat of the spoon helps work small quantities of a paste or ointment base, which is why it features in educational laboratory equipment orders across India.

Porcelain is hard but brittle, so tap the spatula gently against glass rims rather than striking them, and never use it to prise off lids. Rinse it in water after each use, dry it on a clean tissue and store it in a tray apart from metal tools, which can chip it. It is not meant for heating in a flame; a deflagrating spoon does that job.

OEM Manufacturer

Jain Scientific Equipments Private Limited, whose trading name is ScienceLab, is the OEM for Spoon- shoulder and makes it at its own licensed factory at Saha, Ambala, Haryana, India. Schools, colleges, dealers and importers buy it directly from the manufacturer rather than through intermediaries, so class-set orders and later replacements are quoted at source — just ask us. Background on the company is on the ScienceLab company profile.
