Description :

Clock Glass (Borosilicate Glass) (Product Code: SCI-610/103) is a curved borosilicate glass dish, commonly called a watch glass, used to cover beakers, evaporate small volumes, weigh solids and hold samples for observation in chemistry and biology labs. Its glazed, smooth finish and clear vision through the glass let students watch crystals form or examine a sample closely. It is made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, an OEM manufacturer, at its own factory in Ambala, India.

Key Details

Parameter	Detail
Material	Borosilicate glass
Finish	Glazed, smooth
Clarity	Clear vision
Build	Durable
Diameter	Not stated in this listing — ask us
Product code	SCI-610/103
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab) — OEM
Country of origin	India (made in Ambala, Haryana)

What Is the Watch Glass (Clock Glass) Used For?

Placed over the mouth of a beaker, the clock glass acts as a lid that keeps dust out and reduces splashing while a solution is warmed. On its own it serves as a small evaporating surface: a few drops of salt solution left on the glass dry to show crystals, a common demonstration in crystallisation lessons. It is also a handy surface for weighing small amounts of solid or holding a specimen for a closer look with a hand lens.

Borosilicate glass tolerates temperature changes better than ordinary soda glass, so gentle warming, such as resting the glass on a beaker of hot water, is fine. Clean it soon after use, since dried residues are harder to remove, and store the glasses flat with paper between them to protect the glazed surface. It is a basic item in any borosilicate laboratory glassware set for Indian school and college labs.

What to Specify When Ordering

- Diameter: not stated for code SCI-610/103, so state the size you need or see the listing with stated diameters below.
- Purpose: if the glasses will cover beakers, give the beaker sizes so the diameters can match.
- Quantity: the number of glasses per student group.
