Description :

Microbureta (Product Code: SCI-185/62) is a micro burette used to add small, precisely read volumes of titrant during micro-scale titrations in school, college and research laboratories. Chemistry teachers choose it when reagents are costly or samples are limited, and this clear, graduated burette is listed as chemical resistant and heat resistant. It is produced by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, an OEM manufacturer, at its own factory in Ambala, India, for volumetric analysis work.

Specifications

Parameter	Detail
Type	Micro burette (catalogue name: Microbureta)
Scale	Graduated
Colour	Clear
Chemical resistance	Chemical resistant
Heat resistance	Heat resistant
Product code	SCI-185/62
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab) — OEM
Country of origin	India (made in Ambala, Haryana)

What Is a Micro Burette Used For?

A micro burette runs small-scale acid–base and redox titrations in which the end point is reached with far less titrant than a full-size burette would use. That lowers chemical consumption and waste in student practicals, and it suits analyses where the sample itself is scarce, as in microscale chemistry programmes and titration kit work in schools.

Clamp the burette vertically in a stand, rinse it with a little of the titrant, fill it above the zero line and run off some liquid to clear air from the tip before the first reading. Read the bottom of the meniscus at eye level, add titrant drop by drop near the end point, and record readings to the finest graduation.

OEM Manufacturer

ScienceLab is the trading name of Jain Scientific Equipments Private Limited, which produces laboratory apparatus as an OEM at its own licensed factory in Saha, Ambala, Haryana. Because the Microbureta comes factory-direct, schools and distributors can raise questions about its scale, fittings or matching spares with the manufacturer itself instead of a reseller. More about the company is on the ScienceLab company profile.
