Listed applications	Hospital, dental, laboratory, food and industrial use
Product code	SCI-361/147
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Are Disposable Protective Gloves Used For?

In a teaching or research lab, disposable gloves are worn when handling reagents, stains, specimens and dirty glassware, so that residues stay off the skin and are not carried to notebooks, door handles or food. Because these gloves are ambidextrous, either glove fits either hand, which speeds up handing out pairs to a class and reduces waste.

Put on a fresh pair for each task, change them at once if they tear or become heavily contaminated, and remove them by peeling from the cuff so the outer surface folds inward before disposal. They are non-sterile, so they are not a substitute where a procedure calls for sterile gloves. As they are made of latex, anyone with a latex allergy should use a non-latex alternative such as nitrile.

What to Specify When Ordering

- Glove size or mix of sizes — sizes are not stated in the listing, so tell us what you need.
- Total quantity and preferred packing.
- Whether any users need a non-latex option instead.

Supplier

These disposable gloves are supplied by Jain Scientific Equipments Private Limited, which trades as Sc s often toget
