Shelf life	Shelf life depends on the medicine or chemical, its grade and storage conditions; ask us for the expiry date of the batch you are quoted
Product code	SCI-371/152
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is a Laboratory First-Aid Box Used For?

Small accidents are part of practical work: a cut from broken glassware, a minor burn from a burner or hot plate, or a spill on the skin. A first-aid box kept in a known, easy-to-reach place lets a trained member of staff clean and dress the injury straight away and look after the person until medical help arrives.

Give one person the job of checking the box regularly: replace dressings as soon as they are used, check the dates on solutions and ointments, and keep the box closed and dry. Several contents are chemicals, so they should be used only by staff who know their purpose, and the box should be kept out of reach of young children. Serious injuries, eye injuries and chemical burns always need proper medical attention under your institution’s first-aid procedure.

What to Specify When Ordering

- Number of boxes — for example, one per laboratory, prep room or school vehicle.
- Confirmation that the contents list matches your institution’s safety policy.
