**Product Name :**

Apparatus for Demonstrating the Boil-Marriott Law

**Product Code :**

SCL-379/011

**Description :**

**DESCRIPTION :-**

- The Boil-Marriott Law Demonstration Apparatus demonstrates the experiment where for a given mass of gas in T-cube, the volume of a gas is inversely proportional to the pressure, i.e.  $PV = \text{constant}$ .
- This apparatus consists of a transparent tube mounted horizontally with a scale of values (0-300 cm<sup>3</sup>), a gas tap that closes the tube, the pressure gauge located next to the gas tap.
- By changing the position of the rubber stopper, the effective length of the tube can be selected.
- Serve to measure volume and pressure when we change pressure.
- Boyle's law is investigated by changing the position of k.
