Description :

Drying Cabinet (Product Code: SCI-1408/02) is a heated laboratory cabinet used to dry glassware and chromatograms and to keep agar-based media molten in school, college, microbiology and research labs. It has three chromium-plated shelves behind toughened sliding glass doors, a corrosion-resistant epoxy powder-coated body and a height of 900 mm with awidth of 1000 mm. The cabinet is made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**,an OEM manufacturer, at its own factory in Ambala, India.

Specifications

Parameter	Detail
Applications	Drying glassware and chromatograms; keeping agar-based media molten
Finish	Corrosion-resistant epoxy powder paint
Shelves	3, chromium plated
Doors	Toughened sliding glass doors
Controls and indicators	Illuminated power switch; heating indicator light
Mounting	Suitable for shelf or bench mounting
Dimensions	Height 900 mm, width 1000 mm
Product code	SCI-1408/02
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab) — OEM
Country of origin	India (made in Ambala, Haryana)

What Is the Drying Cabinet Used For?

In a teaching or research lab, the cabinet takes over from open-air drying when clean glassware is needed quickly for the next session. Chromatography papers can be dried evenly after development, and in microbiology lab equipment set-ups, flasks of agar-based medium can be held molten until plates are poured, so the medium does not set in the flask.

The sliding glass doors let staff check the shelves without swinging a door into the working space, and the illuminated switch and heating indicator show at a glance that the cabinet is on and heating. Load items so air can move between them, keep flammable solvents out of the heated space, and wipe the epoxy-coated surfaces regularly to keep them clean. The temperature range is not stated in the listing, so confirm it for your application before ordering.

What to Specify When Ordering

- Whether the cabinet will be shelf-mounted or bench-mounted, since both are possible.
- The temperature range you need for glassware, chromatograms or molten agar, so it can be confirmed in the quotation.
