Description :

Tripod Stand 200mm (Product Code: SCI-1315/06) is a three-legged laboratory support used to hold beakers, flasks and wire gauze above a burner in school and college laboratories. It stands 200 mm high with a flat triangular top of 125 mm per side, and its legs are bent outwards for a steady footprint, making it a dependable tripod stand for lab heating work. It is made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, an OEM manufacturer, at its own factory in Ambala, India.

Specifications

Parameter	Detail
Top shape	Triangular, flat
Length of one side of top	125 mm
Height	200 mm
Top material	Cast iron
Leg material	Mild steel, painted
Leg design	Zinc-coated legs bent outwards for stability
Supports	Glassware such as beakers and flasks during experiments
Product code	SCI-1315/06
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab) — OEM
Country of origin	India (made in Ambala, Haryana)

What Is the 200 mm Tripod Stand Used For?

The tripod is the classic platform for heating over a Bunsen burner. A square of wire gauze goes on the cast iron top, the beaker or flask sits on the gauze, and the burner is placed underneath between the legs. Students use this set-up to boil water, evaporate a salt solution to dryness, dissolve solids in warm water or heat a crucible on a pipe-clay triangle. Its three-legged frame resists downward loads and sideways knocks, so glassware stays level while it is being heated or stirred.

Place the stand on a flat, heat-proof bench and set the burner flame so it reaches the gauze without spreading around the glassware. The top holds heat for some time after the burner is switched off, so move hot vessels with tongs and let the tripod cool before storing it. Paired with a burner and gauze, it is part of the basic physics and chemistry lab equipment every school bench needs.

What to Specify When Ordering

- The height you need — this model is 200 mm tall, and a smaller tripod is also listed.
- Quantity per lab, usually one per heating station.
