Description :

Pipette (Product Code: SCL322/059) is a bulb-form glass pipette used to measure and transfer a fixed 25 ml volume of liquid in biology and chemistry labs. Its listed tolerance of 0.03 ml gives students and technicians the precision that titrations, dilutions and standard solutions need, which a beaker or measuring cylinder cannot match. Clear, heat resistant and chemical resistant, this borosilicate laboratory glassware is made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, an OEM manufacturer, at its own factory in Ambala, India.

Specifications

Parameter	Detail
Material	Borosilicate glass
Form	Bulb form
Colour	Clear
Capacity	25 ml
Tolerance	0.03 ml
Heat resistance	Heat resistant
Chemical resistance	Chemical resistant
Product code	SCL322/059
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab) — OEM
Country of origin	India (made in Ambala, Haryana)

What Is the Bulb Pipette Used For?

A bulb pipette is filled slightly above its mark, the liquid is let down until the bottom of the meniscus sits on the mark, and the full 25 ml is then run into the receiving flask. In biology and chemistry practicals this is how students take exact aliquots of a sample for titration, prepare serial dilutions from a stock solution, or add a measured volume of reagent in food tests and enzyme experiments. The 0.03 ml tolerance keeps the delivered volume dependable enough for quantitative school and college work.

Always draw liquid up with a pipette filler rather than by mouth, keep the pipette vertical while reading the mark at eye level, and let it drain freely against the inside wall of the vessel. Rinse it first with a little of the solution being measured and with distilled water after use, then store it upright. Although borosilicate glass resists heat and chemicals, air-drying volumetric glassware instead of baking it helps keep the mark trustworthy. Schools planning a biology lab setup usually keep bulb pipettes alongside graduated ones so each job gets the right tool.
