Description :

Scissors (Product Code: SCL329/63) are a 4 inch pair of pointed steel scissors used for fine cutting of tissue, thread, dressings and paper in biology laboratories and in hospital or clinical settings. The short, silver-coloured blades are chemical resistant, and their sharp tips can start a cut through a very small opening, which suits student dissection work. Part of the zoology lab equipment range for schools and colleges, they are supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, India.

Specifications

Parameter	Detail
Length	4 inches
Type	Pointed
Material	Steel
Colour	Silver
Chemical resistance	Chemical resistant
Usage	Hospital, clinical
Product code	SCL329/63
Supplied by	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Is the Pointed Scissor Used For?

In a zoology practical, pointed scissors make the first small snip through the skin or body wall of a specimen and then extend the opening along a controlled line without tearing the organs beneath. Botany classes use them to trim leaves, petals and roots before mounting, and they are handy for cutting filter paper, thread and cotton to size on the bench. In clinics the same pattern is used for cutting dressings and bandages, and the compact 4 inch length gives good control for close, fine work.

Clean off tissue before it dries on the blades, wipe the pair with a damp cloth, dry it fully and keep the tips protected in a drawer or kit. Reserve the scissors for soft materials, because cutting wire or thick card quickly blunts the edges. A spare pair or two is a sensible addition to any dissection kit for school labs.

Supplier

These scissors are supplied by Jain Scientific Equipments Private Limited, which trades as ScienceLab from Ambala, Haryana, India, to schools, colleges, hospitals and laboratories. For vendor registration and export paperwork, the supplying company holds Importer-Exporter Code AAECJ8618A (DGFT) and GSTIN 06AAECJ8618A1ZT. Read more on our company profile.
