Description :

Hangers with Slotted Weights (Product Code: SCL260/029) is a chrome-plated iron slotted weight with hanger used to apply a small, known load in school physics practicals. It suits lighter experiments where 100 gm is enough, since it is listed as 1 x 100 gm, such as balancing forceson a parallelogram board or pulling a roller up an inclined plane apparatus. It is made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, an OEM manufacturer, at its own factory in Ambala, India.

Specifications

Parameter	Detail
Item	Slotted weight with hanger
Material and finish	Iron, chrome plated
Capacity	100 gm
Configuration	1 x 100 gm
Hanger	Hooked design for easy hanging from balances
Durability	Resistant to corrosion and abrasion
Design	Compact and portable
Product code	SCL260/029
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab) — OEM
Country of origin	India (made in Ambala, Haryana)

What Is the 100 gm Hanger with Slotted Weight Used For?

Many force and equilibrium practicals need only a light, known pull. In the parallelogram-of-forces experiment, weights hang from strings running over pulleys and students compare the resultant with the measured forces; on an inclined plane with roller and pan, a small load balances the roller's pull down the slope. A 100 gm weight gives roughly 0.98 N, a convenient unit for these calculations and for checking a spring balance at the low end of its scale.

The chrome-plated finish is bright and easy to wipe clean, which helps when weights are handled by many students across a term. Hook the hanger securely onto the string loop before letting go, keep the pieces from each bench together so readings stay comparable, and store the weight dry after use.

What to Specify When Ordering

- Whether you need this single 100 gm chrome-plated hanger weight or the 500 gm black-iron set (5 x 100 gm)
- How many pieces each bench needs, for example one per string in a parallelogram-of-forces set-up
-
