Description :

Test Tube Rack With Drying Pegs (Product Code: SLE/CH/21) combines two jobs on one polished beech wood platform: two rows of holes to hold test tubes during an experiment, and 12 vertical pegs on which freshly washed tubes can be hung upside down to dry quickly. Having both on a single base saves bench space and keeps clean and in-use tubes together at each workstation. Made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, it is apractical test tube rack for school labs in India, college practical rooms and teaching labs abroad.

Specifications

Parameter	Detail
Type	Test tube rack with integrated drying pegs
Material	Beech wood, well polished
Tube holding	Two rows of holes
Drying pegs	12 vertical pegs for quick drying of test tubes
Customisation	Can be made to individual preference on request

Typical Use

In qualitative chemistry practicals students often work through a sequence of test-tube reactions, washing and reusing the same tubes several times in one session. With this rack, tubes in use stand in the two rows of holes while washed tubes are inverted on the pegs to drain, so nobody has to walk to a separate drying board. It works just as well in biology for food tests or enzyme experiments that use multiple tubes side by side.

Rinse tubes with distilled water before hanging them so they dry without marks, and leave space between wet tubes on the pegs to let air circulate. Because the rack is wooden, it should be kept away from open flames; place hot tubes back only after they have cooled a little. For labs with special needs, such as a different hole layout, the design can be customised, which makes it a flexible piece of chemistry lab equipment for schools setting up new benches.

Manufacturer

Jain Scientific Equipments Private Limited makes this rack under the **ScienceLab** brand in Ambala, Haryana, serving schools, colleges and dealers. More about us is available in our company profile.

Related Chemistry Lab Equipment

Items used with this rack during test-tube experiments:

- Test Tube — glass tubes to stock the rack and pegs
- Brush Test Tube — for scrubbing tubes before they go on the drying pegs
- Test Tube Holder — for gripping a tube while heating it over a burner
