Product Name :

Burette Racks

Product Code :

SLE/CH/23

Description :

Burette Racks (Product Code: SLE/CH/23) is a single-burette holder built entirely from seasoned hardwood, with a 200 × 100 mm base, a rod of approximately 460 mm height and 16 mm diameter, and moulded plastic clamping screws that grip the burette without metal touching the glass. It gives each student a self-contained burette stand for titrations at the bench. Manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, it is a straightforward burette stand for labs in India and international markets that prefer wood over metal hardware.

Specifications

Parameter	Detail
Type	Burette holder for a single burette
Material	Seasoned hardwood throughout, well polished
Base size	200 × 100 mm
Rod size	Approx. 460 × 16 mm (height × diameter)
Clamping	Moulded plastic clamping screws

Typical Use

This holder is set up at a student position for acid-base, redox or precipitation titrations. The burette is clamped to the wooden rod with the plastic screws, the conical flask sits on the base beneath the jet (a white tile makes the end-point colour easier to see), and the student operates the stopcock with one hand while swirling the flask with the other. The hardwood base is broad enough to keep the tall rod steady during this routine.

Because it is dedicated to one burette and needs no boss head or separate clamp, it suits titration kit setups for schools where quick assembly matters. Tighten the plastic screws just enough to hold the burette vertical, check the alignment against a vertical edge before reading, and wipe the base if titrant drips onto it.

Manufacturer

Made by **Jain Scientific Equipments Private Limited**, which trades as **ScienceLab** and is based in Ambala, Haryana. You can read about the company in our company profile.
