Description :

Bottle Reagent, W.M. Glass Amber Colour (Product Code: SLE/CH/35) is an amber soda glass bottle with a wide mouth and a dustproof flat stopper. The amber tint cuts down the light reaching the contents, which is why chemists keep light-sensitive salts, stains and prepared reagents in it.It is made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, and comes in sixsizes, from a compact 30 ml bottle to a 1000 ml stock bottle.

Specifications

Parameter	Detail
Glass	Soda glass, amber colour
Mouth	Wide mouth (W.M.)
Stopper	Dustproof flat stopper
Capacity	30 ml; 60 ml; 125 ml; 250 ml; 500 ml; 1000 ml

Typical Use

Amber bottles protect reagents that darken or decompose in daylight. In a school or college prep room they are the usual home for silver nitrate crystals, iodine and potassium permanganate, and for making up silver nitrate solution or iodine solution for the lab when the wide mouth is useful for adding solids. The 30 ml size is convenient for small, costly reagents shared across a class; the larger bottles hold the stock.

Store the bottles in a cupboard or on a shaded shelf even though the glass filters light, and label each one clearly, because amber glass makes it harder to see the contents. Close the flat stopper right after use to keep out dust and moisture, and wipe the neck before closing so that crystals do not build up around the stopper.

Manufacturer

This bottle is produced by Jain Scientific Equipments Private Limited, the Ambala, Haryana company behind the ScienceLab brand, which makes glassware and apparatus for education and testing. More information is on our company profile.

Related Chemistry Lab Equipment

Other containers and tools for storing and dispensing light-sensitive reagents:

- Reagent Bottle Narrow Mouth, Amber Glass — amber storage for liquid reagents that need controlled pouring.
- Bottle Dropping — amber dropping bottle for dispensing small quantities of solution.
- Bottle Reagent, W.M. Glass — the non-amber wide-mouth bottle for ordinary solids.
- Spatula, 140mm — for taking solid reagent out of the wide mouth.
