Description :

Test Tube Stand, Polythene (Product Code: SLE/CH/54) is a compact student rack in high-density polythene that holds 2 tubes of 25 mm diameter and 4 tubes of 16 mm diameter, with 6 vertical pegs along the rear edge of the base for drying washed tubes. Its 210 x 82 mm basegives the rack a steady footprint on a crowded bench. It is a natural choice for individual studentplaces in school and college chemistry and biology labs, and is made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, a school laboratory equipment supplier in India andabroad.

Specifications

Parameter	Detail
Material	High-density polythene
Base size	210 x 82 mm
Large tube places	2 tubes of 25 mm diameter
Small tube places	4 tubes of 16 mm diameter
Drying pegs	6 vertical pegs at the rear edge of the base

Typical Use

The mixed layout matches the way many school practicals are run: the four smaller places hold the test tubes for a set of reagent tests, while the two larger places take boiling tubes or wider tubes for heating, gas tests or larger volumes. A single rack therefore covers a typical student's needs for a qualitative analysis session, and the drying pegs mean washed tubes can be left upside down on the same rack at the end of the lesson.

High-density polythene does not rust and is easy to wipe clean after spills of dilute acids or salt solutions. Keep hot tubes in a holder or on a heatproof mat until they have cooled, rather than placing them straight into the plastic rack. With one rack per student, benches stay tidier and breakages from rolling tubes are reduced.

Manufacturer

Based in Ambala, Haryana, Jain Scientific Equipments Private Limited trades as ScienceLab and produces practical apparatus for science teaching, supplying schools, colleges and training institutes in India and international markets. See the company profile for more.

Related Chemistry Lab Equipment

What a student place usually needs alongside this rack:

- Test Tube — borosilicate tubes for the smaller places.
- Boiling Tube — for heating work; check its diameter against the larger places.
- Test Tube Holder — to hold tubes during heating before they return to the rack.
- Brush Test Tube — to clean tubes before hanging them on the drying pegs.
- Test Tube Rack With Drying Pegs — a larger wooden rack for demonstration benches.
