Description :

Test Tube Holder (Product Code: SLE/CH/66) is a hand-held clip for gripping a test tube while it is heated, shaken or poured, keeping fingers well away from the flame and the contents. It is formed from chrome-plated spring steel wire with finger grips, measures 130 mm overall, and its jaws take tubes up to 38 mm in diameter. The holder is made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, as part of its chemistry lab equipment in India and international markets, and is standard issue for every student carrying out a salt analysis practical in school.

Specifications

Parameter	Detail
Material	Spring steel wire, chrome plated
Tube capacity	Jaws accept tubes up to 38 mm diameter
Jaw alignment	Maintained by a wire collar
Handle	Finger grips
Overall length	130 mm

Typical Use

Dry-heating a salt, warming a solution to speed a reaction, and running preliminary tests forgases all involve holding a tube in or near a flame. Clip the holder near the mouth of the tube, keep the tube tilted and pointed away from yourself and others, and move it gently through the flame so the contents heat evenly and do not bump out. The wire collar keeps the two jaws lined up, so the tube does not twist loose as it is tilted.

The same holder is handy for dipping a tube into a hot water bath, or for carrying a warm tube back to the rack. In a flame test kit for school practicals in India, it is usually issued with a Bunsen burner or spirit lamp and a stand of clean tubes at each bench. After use, rest the holder on the bench rather than leaving it clipped to a hot tube.

Manufacturer

This holder is a product of **Jain Scientific Equipments Private Limited** of Ambala, Haryana, which uses the trading name ScienceLab for its laboratory apparatus and teaching equipment. Learn more on our company profile.

Related Chemistry Lab Equipment

Apparatus used alongside a test tube holder at the bench:

- Test Tube — the glassware the holder grips
- Bunsen Burner — the usual gas flame for heating tubes
- Glass Spirit Lamp — a flame source where gas is not available
- Test Tube Stand (Wire Pattern) — holds tubes upright before and after heating
- Brush Test Tube — for cleaning tubes after the practical
