Coating	PVC
Liner	Cotton interlock
Colour	Red
Listed size	10
Sizes available	7 to 10
Material	PVC
Product code	SLE/G/03
Manufacturer	Jain Scientific Equipments Pvt Ltd (ScienceLab), Ambala, India

What Are Red PVC Gloves Used For?

A PVC coating over a cotton interlock liner gives a glove that sheds water and cleaning solutions while the soft liner absorbs sweat and makes the glove comfortable to pull on and off. That combination suits the wash-up area of a school or college lab, where technicians scrub glassware, empty sinks and wipe down benches, as well as cleaning, stores and maintenance jobs across a campus.

The bright red colour makes these gloves easy to keep separate from examination or food-area gloves. Before using them with any particular chemical, check the chemical's safety data sheet or ask us, because resistance depends on the substance and its concentration; for stronger chemicals a longer chemical gauntlet is the better choice. Many buyers add a few pairs when ordering from a chemistry consumables supplier in India.

What to Specify When Ordering

- Glove size for each user, from 7 to 10.
- Number of pairs per size.
- The chemicals or cleaning agents they will be used with, so we can advise on suitability.
