Product Name :

Deluxe Human Male and Female Torso Model

Product Code :

SLE/A/22

Description :

Deluxe Human Male and Female Torso Model (Product Code: SLE/A/22) is a life-size, 27-part torso that teaches from both front and back: the open back exposes musculature, the vertebral column and paravertebral nerve branches, while interchangeable male and female urogenital inserts let one model cover both sexes. A partially dissected head shows the buccal cavity, and half of the brain lifts out to reveal internal structure. Medical, nursing and allied health colleges, and senior schools buying biology lab equipment in India for a complete lab setup, use it as a central demonstration piece. It is manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala.

Specifications

Parameter	Detail
Scale	Life size
Number of parts	27
Back	Open back with musculature, vertebral column and paravertebral nerve branches
Spine	Removable vertebra with a section of spinal cord
Head	Partial dissection showing the anatomy of the buccal cavity, including vasculature, muscles, glands and osseous structures
Brain	Half of the brain removable to view internal structure
Urogenital inserts	Interchangeable male and female inserts

Typical Use

With 27 parts, the torso supports a full term of lessons rather than a single topic. A typical sequence begins with the removable half brain for the nervous system, then turns the model around to study the back muscles and the vertebral column. Lifting out the vertebra with its segment of spinal cord shows how the cord is protected, and the paravertebral nerve branches show where spinal nerves run. The dissected head gives dental, ENT and speech-therapy students a view of the mouth, its glands and blood supply.

Swapping the male and female urogenital inserts lets teachers compare the two reproductive systems directly without buying a second torso. For viva and practical exams, examiners often remove several parts and ask candidates to replace and name them. Store the torso on a stable table, keep the smaller parts in a labelled box, and cover it when not in use.

Manufacturer

The torso is made by Jain Scientific Equipments Private Limited, which operates under the ScienceLab brand from Ambala, Haryana, and produces full-size and miniature anatomy models for teaching institutions. Company background is available on the ScienceLab profile page.
