Description :

Human Lymphatic System Model (Product Code: SLE/A/23) is a relief model of the human lymphatic system at two-thirds life size, giving learners a whole-body view of a system that is hard to picture from textbook diagrams alone. At 84 x 54 x 12 cm it is large enough for a class to study together, and a numbered key accompanies it for identifying the structures shown. Biology teachers, nursing and paramedical tutors, and physiology departments sourcing biology lab equipment in India for immunity and circulation topics use it. It is manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala.

Specifications

Parameter	Detail
Type	Relief model of the human lymphatic system
Scale	2/3x life size
Size	84 x 54 x 12 cm
Key	Numbered key

Typical Use

The lymphatic system is often taught as an afterthought to blood circulation, yet it explains swelling, the spread of infection and the body's immune defences. A relief model lets the teacher trace how lymph collects from the tissues, passes through lymph nodes where it is filtered, and returns to the bloodstream near the heart. Students can then use the numbered key to locate each labelled point themselves, turning a lecture into a short identification exercise.

Nursing and physiotherapy tutors use the model to explain in general terms why lymph nodes enlarge during infection and why swelling can follow surgery that affects lymph drainage. In schools, it supports lessons on immunity and on how the circulatory and lymphatic systems work together. Because it is a large, flat relief, dust it regularly with a soft brush and keep it where it will not be knocked.

Manufacturer

Jain Scientific Equipments Private Limited manufactures this lymphatic relief under the ScienceLab name at Ambala, Haryana, where the company builds anatomy models, biology apparatus and general laboratory equipment for education. More information is on the company profile.
