Description :

Miniature Human Muscular Figure (Product Code: SLE/A/25) is a compact full-body figure at about a quarter of life size that shows the superficial muscles of the whole body, each positioned and sized to correct scale. A numbered key identifies 51 structures, so the figure works as both a demonstration piece and a self-study tool. Sports science, physical education, physiotherapy, fitness training and school biology classes use it to learn muscle names and locations, and it is a space-saving addition to any human biology model set in India. It is manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, and stands on a durable polymer base.

Specifications

Parameter	Detail
Scale	About 1/4x life size
Size	25 x 18 x 40 cm
Base	Durable polymer base
Coverage	Overview of the superficial musculature of the whole figure
Accuracy of layout	All muscles positioned and sized to correct scale
Key	Numbered key with 51 identified structures

Typical Use

Physical education and fitness instructors use the figure to connect exercises with the muscles they work: pointing to the chest, shoulder, thigh or calf muscles while describing a movement makes the link clear. Because the muscles are to scale, students can compare the relative size of large prime movers with smaller stabilising muscles and understand why some injuries are more common than others. The 51-point key suits quick quizzes, flash-card style revision and label-the-diagram homework.

At this size the figure fits on a desk or a shelf in a sports office, clinic reception or classroom, where a full-size muscular model would be impractical. It also transports easily for workshops and outreach sessions. Dust it with a soft brush and avoid placing it near windows where strong sunlight could fade the colouring.

Manufacturer

Jain Scientific Equipments Private Limited, trading as ScienceLab, produces this miniature figure in Ambala, Haryana, alongside full-size muscular and skeletal teaching models for schools, colleges and training centres. Visit the ScienceLab profile to learn more about the company.
