Description :

3B Human Left Leg Model (Product Code: SLE/A/35) is a stand-mounted model of the left lower limb at about 2/3× life size, roughly 75 cm long, that can be taken apart into 9 parts. It gives anatomy, physiotherapy, sports-science and nursing classes a single leg they can study region by region, from thigh to foot, without needing a full figure. Institutions looking for biology lab equipment in India for college teaching can order it from **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, which supplies this model.

Specifications

Parameter	Detail
Type	Dissectible model of the human left leg
Scale	About 2/3× life size
Length of leg	About 75 cm
Number of parts	Dissectible into 9 parts
Mounting	On stand

Typical Use

A dedicated limb model lets a lecturer spend a full session on the lower extremity. Students can work through the thigh, knee, lower leg and foot in order, removing parts as each region is covered and naming what they see before moving on. Physiotherapy and sports-science learners find this especially useful when linking anatomy to movement and common injuries of the leg.

Because the model stands upright on its stand at about 75 cm, it can be placed beside a full skeleton or muscular figure so that the class can compare scale and position. For practical examinations, remove one or two of the 9 parts and ask candidates to identify them and replace them correctly; this is quick to set up and easy to mark.

Supplier

Jain Scientific Equipments Private Limited, trading as **ScienceLab** and based in Ambala, Haryana, supplies this leg model to teaching institutions in India and international markets. As the product name includes the 3B designation, ask us to confirm brand and origin details at the time of quotation. More about the company is on our company profile.
